Was macht die Pure Consulting eigentlich so?

ChatGPT

Pure Consulting, ein führendes Beratungsunternehmen aus ~~Saudi-Arabien~~, spezialisiert sich auf die Entwicklung und Implementierung von ~~Strategien~~ für den ~~öffentlichen~~ und ~~privaten~~ Sektor. Sie bieten Dienstleistungen in den Bereichen ~~Strategie~~, ~~Marketing~~, ~~Kommunikation~~, ~~Organisationsentwicklung~~ und ~~Transformationsmanagement~~ an. Ihr Ziel ist es, nachhaltigen Erfolg für ihre Kunden zu fördern, indem sie innovative und maßgeschneiderte Lösungen anbieten [1].

ChatGPT

Die Pure Consulting AG mit Sitz in Root, Schweiz, ist ein Beratungsunternehmen, das sich auf SAP-Lösungen spezialisiert hat. Sie bieten ein breites Spektrum an Dienstleistungen, einschließlich:

1. **SAP S/4HANA Transformationen:** Analyse, Konzeption und Umsetzung von Transformations-Roadmaps für SAP S/4HANA.
2. **Technology Consulting:** Beratung zu technischen Herausforderungen und Implementierung von Technologielösungen.
3. **Custom Development:** Entwicklung von kundenspezifischen Applikationen, Erweiterungen und Schnittstellen.
4. **Process Consulting:** Verbesserung von Geschäftsprozessen zur Steigerung der Effizienz.
5. **Analytics & Reporting:** Bereitstellung von Analysen und Berichten für fundiertere Entscheidungsprozesse.
6. **Maintenance & Support:** Maßgeschneidertes Application Management und Support für Systeme und Applikationen.

Zudem legt Pure Consulting AG Wert auf Innovation und Technologie, um nachhaltige und effiziente Lösungen für ihre Kunden zu schaffen. Sie betonen auch die Wichtigkeit von Mitarbeiterentwicklung und bieten verschiedene Schulungen über ihre Academy an [\(7\)](#) [\(7\)](#).

Overview and objectives of the session

The Idea behind the app

RESEARCH

Use of the Cocktail API

API

Backend in SAP

**RAP
BACKEND**

GenAI image generation

GenAI

Extension of the Frontend

FRONTEND

Research

- Context

- Typically, implementation revolves around SAP in-house capabilities — data and functions.
- This project transcended the norm by integrating a Fiori application with external systems for a client.
- For this session a Fiori application was developed to demonstrate an extended suite of capabilities

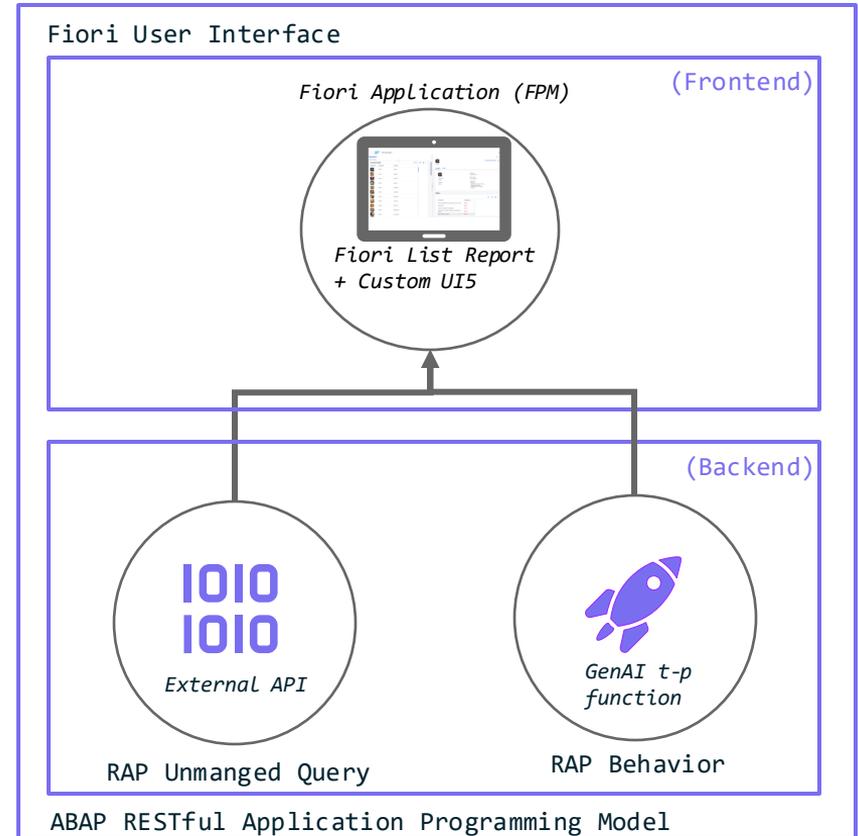

- Technical Breakthrough

- Data integration: Connection of non-SAP data sources
- Functionality expansion: External third-party functions for enhanced app capabilities
- UI enrichment: Crafting hybrid Fiori apps, merging Elements and SAPUI5 freestyle

Research

- **Core features of the application**
 - FPM for UI enhancement and optimization
 - Unmanged query for external data
 - RAP Behavior for including third-party GenAI image generation
- **Achievement**
 - From foundational RAP and Fiori Elements to an AI-enhanced and external integrated hybrid Fiori application

Cocktail API

- TheCocktailDB API

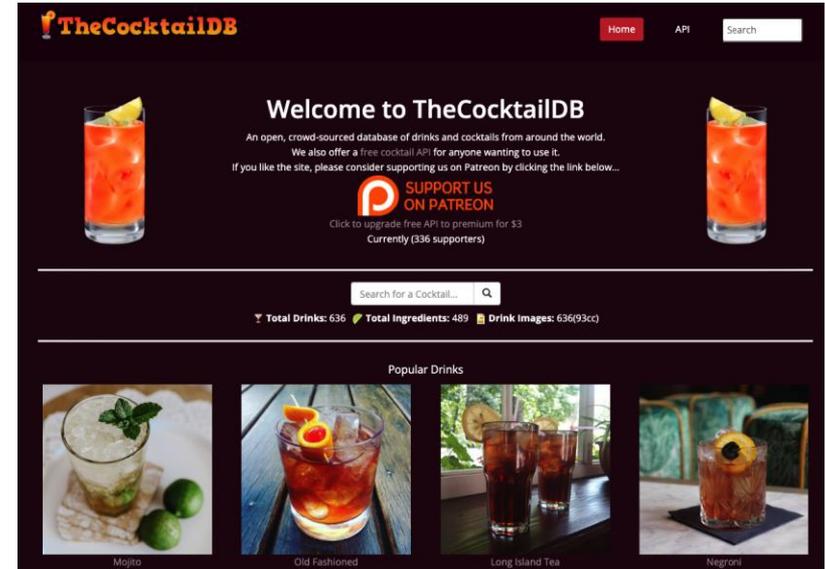

- Access to a comprehensive database of cocktails and mixed drinks.
- Free API with extensive cocktail data.
- Ability to search for cocktails by name or ID.

- API Access

- Simple integration via REST
- Returns data in JSON format for ease of use.
- Free to use API

- SAP Integration

- HTTP GET via ABAP
`CL_WEB_HTTP_CLIENT_MANAGER(A4C)`
- Map JSON to ABAP element

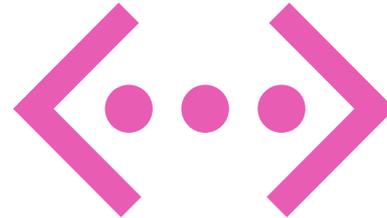

Cocktail API

- Example query

- **Retrieve Margarita:** www.thecocktaildb.com/api/json/v1/1/search.php?s=margarita

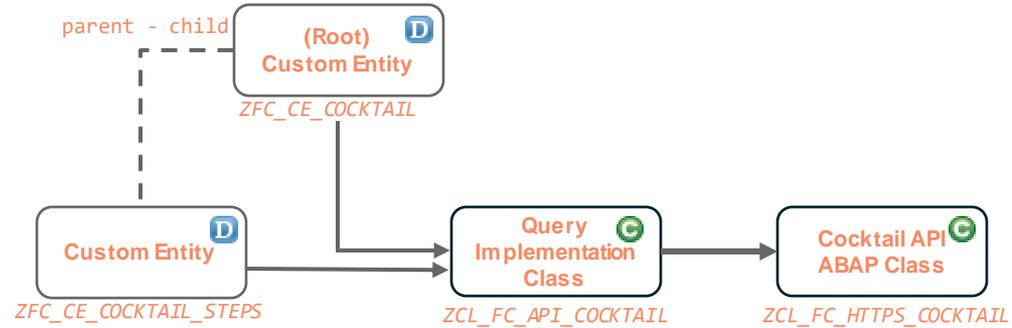

- Example of provided JSON

```
{
  "drinks": [
    "idDrink": "11007",
    "strDrink": "Margarita",
    "strCategory": "Ordinary Drink",
    "strGlass": "Cocktail glass",
    "strInstructions": "Rub the rim[...]",
    "strDrinkThumb": ",$thumb",
    "strIngredient1": "Tequila",
    ...
    "strIngredient15": " Triple sec",
  ]
}
```

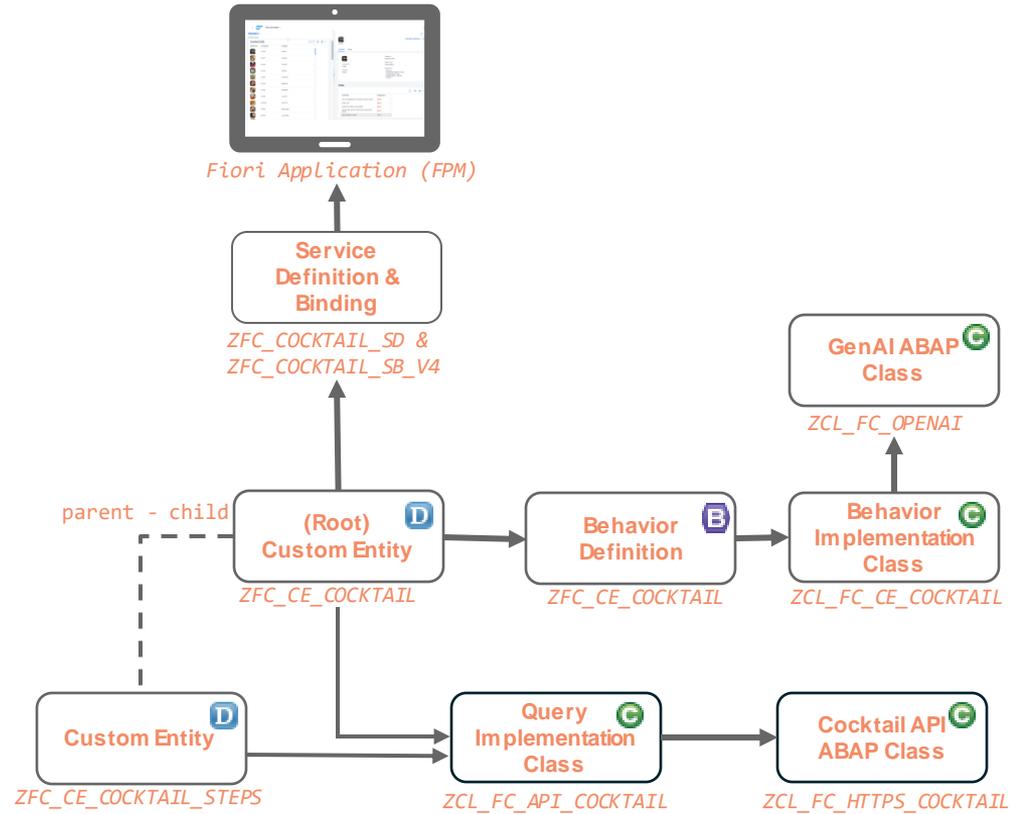

Restful ABAP

- **Read of external API Data**
 - Need custom entity
 - Define custom structure without need of DDIC table
- **Hierarchical CDS Structure (Cocktails and Steps)**
 - Unmanaged Query with ABAP class
 - One Class for both
 - Call Cocktail API class in Unmanaged Query
- **CDS UI Annotations**
 - Various annotations for the UI (LineItem, Identification, Facets, ...)

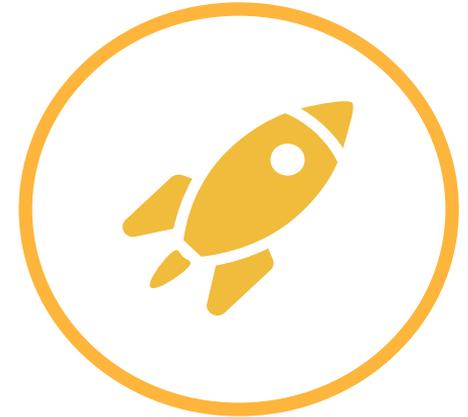

Restful ABAP

- Behavior Definition & Implementation for root entity
 - RAP Action to include third-party GenAI image generation
 - Action implementation in Behavior Implementation Class
 - Call GenAI ABAP class which includes AI image generation
- Service Definition & Binding to use in the UI
 - OData V4

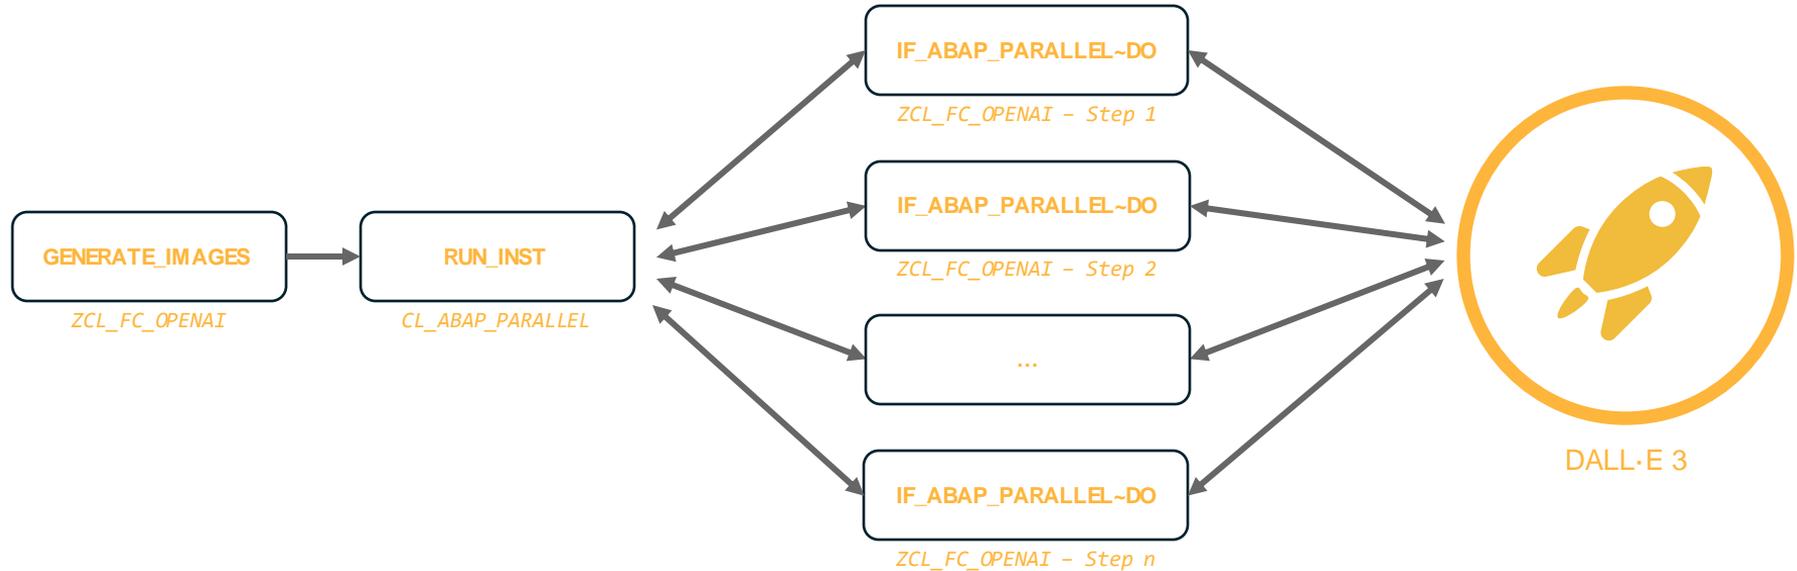

GenAI Image Generation

- **Overview**
 - Leveraging advanced AI algorithms for image synthesis and creativity
 - cutting-edge AI to produce custom visuals and illustrations
- **Performance and Efficiency**
 - Semi-rapid generation approx. 20-30 seconds per image
 - Ensures timely delivery of high volumes of images
- **Parallel image generation needed**
 - Parallelisation using `CL_ABAP_PARALLEL`
 - Downport for ABAP 7.50 - Note 2791374
- **Cost Efficiency**
 - \$0.04 per image - 25 images at \$1.

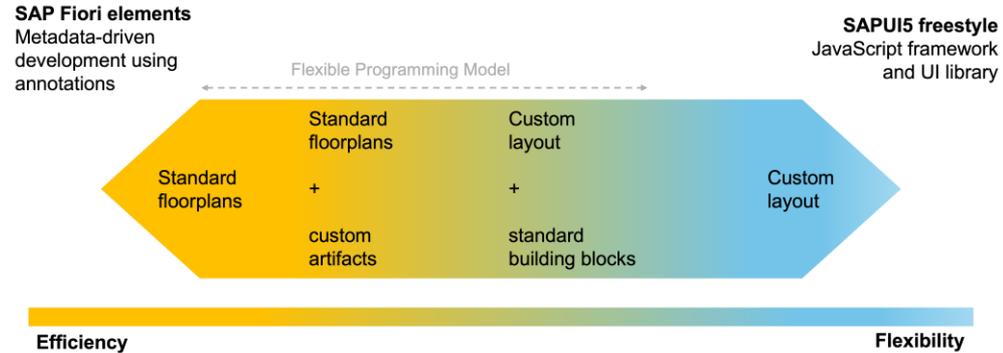

GenAI Image Generation

- OpenAI Endpoint for image generation
 - Included in ABAP class

Frontend

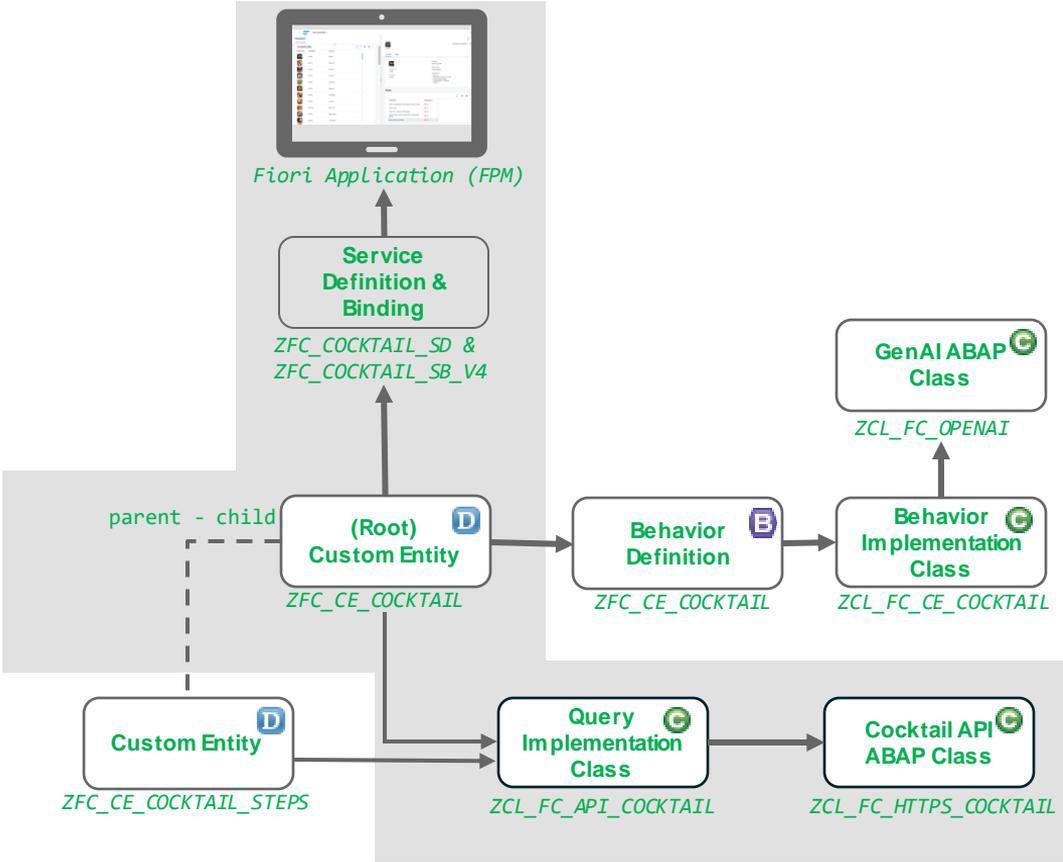

- Use of Flexible Programming Model (FPM)
 - The FPM is designed to provide the development of **hybrid application**
 - **Combination:** standard floorplans with elements for tailored functionality
 - balance between **efficiency and flexibility**
 - Flexible Programming Model Explorer
- Use as the basis for a Fiori Elements List Report
 - UI annotations for the view in the application
- Custom Steps Object Page (3th page)
 - Own view and JS controller
 - Integration FPM Macro

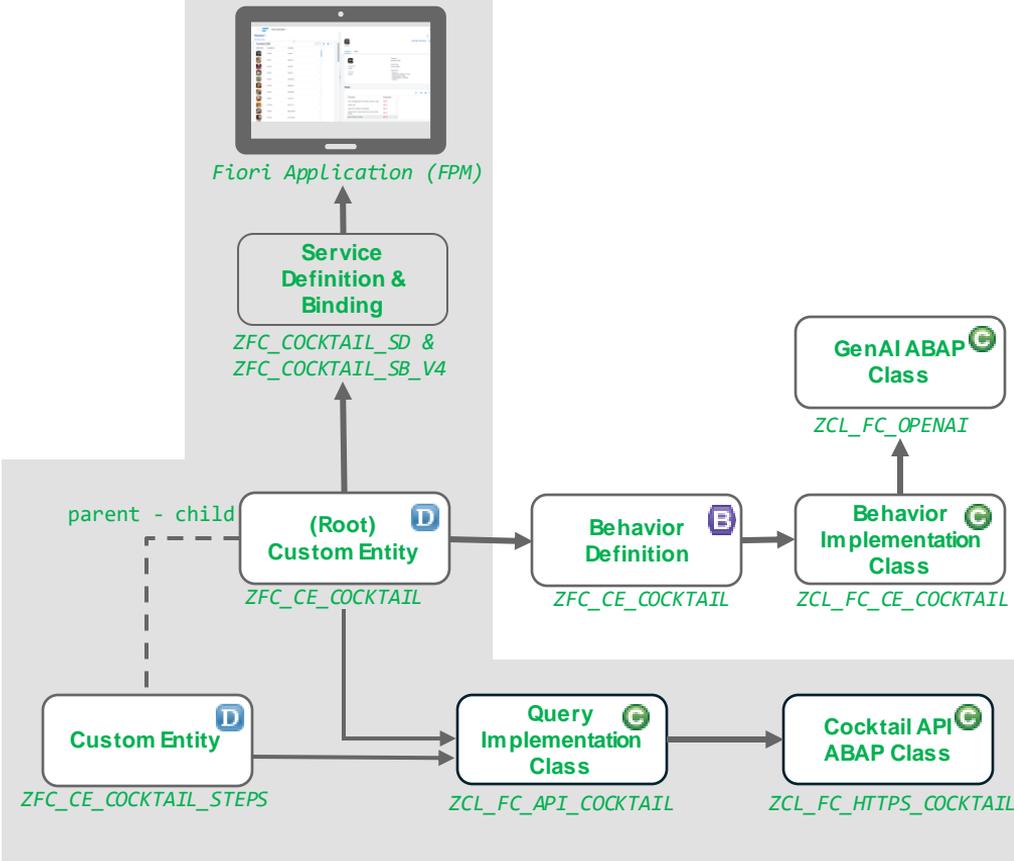

Live Demo

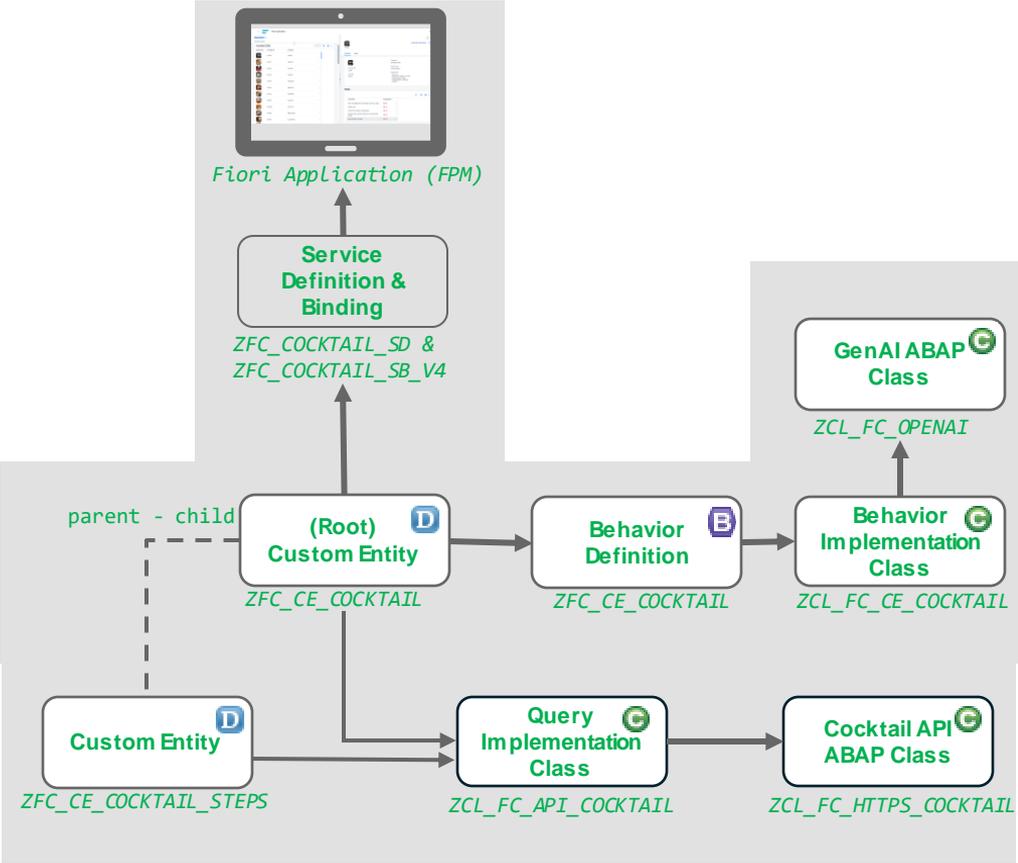

Live Demo Example (1)

Live Demo Example (1)

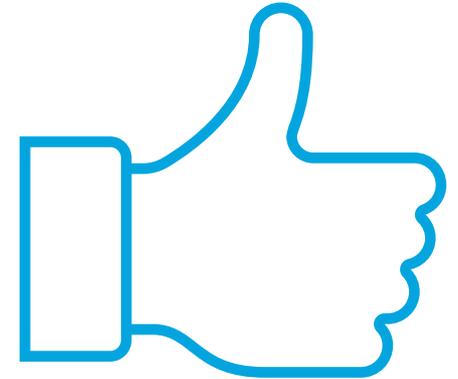

Live Demo Example (1)

03 Conculusion

Lessons learned

- Common thinking:
 - SAP RAP in combination with Fiori Elements is bland
 - Only in-house capabilities
- RAP in combination with FPM is very powerful!
 - External Backend functions (data, functionalities, ...)
 - FPM for UI enrichment and optimization
 - Hybrid applications (UI & Backend)
- The future of SAP development is well formed
 - Humans are creatures of habit
 - Get involved and marvel

Vielen Dank!
